CAREER SUMMARY

With 7.5 years of experience in React Native application development, I specialize in conceptualizing innovative app solutions using the latest technology, design theory, and creativity. I've successfully developed over 10+ Android and iOS applications across various domains, demonstrating strong problem-solving skills and a commitment to continuous learning and research

SKILLS

- **Software Development life cycle and agile development process**
- **Language and Technologies** - Javascript, Typescript, OOPs, Fundamental concept of Android and iOS, SDK, Next, React, React-Native, IOT, iOS, Android.
- **Repository** - Github, GitLab, BitBucket, Jenkins, Fastlane
- **DataBases** - Firebase, Realm
- **Tools and IDEs** - Visual Studio, Android Studio, Xcode, Postman, Swagger, SourceTree
- **Web Services Integrations** - JSON, XML, REST, GraphQL
- **Networking Libraries/Server** - HTTP client, WebSocket, Akamai, Vision camera
- **Google API integration/SDK/Lib** - Map, Direction, Geocoding, Road API, JioXplore Maps, 2FAuth, MFAuth
- **Firebase** - FCM, Firebase Auth, firebase, Admob integrated with firebase, fire store, firebase ML
- **Social Media Integration** - Facebook, Google+
- **Payment Gateways** - Hyperpay(SDK), RazorPay
- **Project Management Tool** - Trello, Jira, MentiseBT, asana
- **Testing tools/lib** - Jest
- **Security** - SSL Pinning, Encryption

EDUCATION

Master's Degree: Information Technology Mobile Computing
Gls Universit, Ahemdabad- Jun 2017 - May 2019

Bachelor of Engineering in Computer Science and Engineering Sri Vivekananda College, Surat- Jan 2014 - Dec 2017

EXPERIENCE

The Product Guys, Bangalore,
Sr Engineer
Mar 2026 - May 2026

Maplebell Private Limited, Bangalore,
Sr Engineer
Nov 2025 - Mar 2026

NotionMindz Technology LLP, Bangalore,
Sr Engineer
Jan 2023 - Nov 2025

Opash Software, Surat
Sr. Software Engineer
Dec 2021 - Dec 2022

EbizzInfotech,
Surat Software Engineer Apr 2020 - Nov 2021

Meritorious Infotech, Surat
Software Engineer
Jul 2019 - Mar 2020

Rain Infotech, Surat
Software Engineer
Jan 2019 - Jun 2019

KEY PROJECTS:

JB IQ – Reliance Consumer Intelligence

Technologies used:

JavaScript, TypeScript, React Native, Android, iOS, Redux Toolkit, Firebase, REST APIs, AI/ML APIs, Node.js, Axios, Secure Storage, Push Notifications, Deep Linking, Fastlane, React Navigation, WebSockets, Analytics, Biometric Authentication, Git.

Project description:

JB IQ is an AI-powered consumer intelligence and analytics platform developed for Reliance to enhance customer engagement and business decision-making through intelligent insights. The application leverages Artificial Intelligence and real-time analytics to understand customer behavior, preferences, purchasing patterns, and market trends.

The platform enables business teams to access smart dashboards, AI-generated recommendations, predictive analytics, and personalized customer insights. It helps improve operational efficiency, customer targeting, and strategic planning through data-driven intelligence. The application is designed with a focus on scalability, performance, security, and seamless user experience across Android and iOS platforms.

Roles and Responsibilities:

- Developed and maintained cross-platform mobile applications using React Native for Android and iOS platforms.
- Integrated AI-based services and analytics APIs to provide intelligent consumer insights and recommendation features.
- Implemented secure authentication and authorization mechanisms including biometric login and session handling.
- Consumed and managed REST APIs for real-time customer data, analytics dashboards, and reporting modules.
- Managed complex application state using Redux Toolkit for scalable and maintainable architecture.
- Integrated push notifications and real-time updates for alerts, recommendations, and customer engagement tracking.
- Optimized application performance, API handling, and memory usage to ensure smooth user experience across devices.
- Implemented deep linking and navigation flows using React Navigation for seamless app usability.
- Worked on secure local storage and encryption of sensitive user and analytics data.
- Collaborated with AI/ML, backend, UI/UX, and QA teams in agile development cycles to deliver high-quality releases.
- Conducted unit testing, debugging, and performance testing to maintain application stability and reliability.
- Assisted in CI/CD automation and deployment processes for App Store and Google Play Store releases using Fastlane.
- Participated in code reviews, sprint planning, and technical discussions to improve application quality and development standards.

Velrics Workforce Management

Technologies used:

JavaScript, TypeScript, React-Native, Android, iOS, Redux, REST APIs, Axios, Firebase, Push Notifications, React Navigation, Secure Storage, Geolocation, Offline Data Sync, Fastlane, Deep Linking, Biometric Authentication, Agile Methodology, Jest.

Project description:

Velrics Workforce Management is an advanced workforce management mobile application designed to streamline employee operations, attendance tracking, task management, and real-time workforce monitoring. The application enables organizations to efficiently manage field employees, monitor work progress, assign tasks, and enhance communication between management and staff.

The app focuses on delivering a secure, scalable, and user-friendly experience with real-time updates, location tracking, and seamless cross-platform performance on both Android and iOS devices.

Roles and Responsibilities:

- Developed and maintained the mobile application using React Native for both Android and iOS platforms.
- Implemented secure login and authentication mechanisms including biometric authentication and session handling.
- Integrated REST APIs for employee management, attendance tracking, task assignments, and real-time operational updates.
- Managed application state efficiently using Redux for scalable architecture and maintainable code structure.
- Developed real-time push notification functionality for task alerts, updates, and employee communication.
- Integrated geolocation and workforce tracking features to monitor field operations effectively.
- Implemented deep linking and navigation flows using React Navigation for smooth user experience.
- Optimized application performance, memory usage, and responsiveness across multiple devices and screen sizes.
- Added secure local storage for handling sensitive user and session data securely.
- Supported offline functionality and synchronized data when internet connectivity was restored.
- Performed unit testing, bug fixing, and QA support to ensure application stability and reliability.
- Assisted in CI/CD processes and deployment using Fastlane for App Store and Google Play Store releases.
- Collaborated closely with backend developers, UI/UX designers, and QA teams in Agile development cycles.

Alrajhi Capital

Technologies used:

JavaScript, Typescript, React-Native, Android, iOS, Firebase, Redux, REST APIs, Jest, Axios, Secure Storage, Deep Linking, Fastlane Branch.io, Push Notifications, React Navigation, Biometric Authentication.

Project description:

Alrajhi Capital is a cutting-edge mobile application tailored for investment and trading services under Al Rajhi Bank. It allows users to manage their portfolios, track stock prices in real-time, execute buy/sell orders, and stay informed with market insights. The app is designed with a focus on performance, security, and an intuitive user experience, providing seamless access to local and international trading services.

Roles and Responsibilities:

- Built and maintained the mobile application using React Native targeting both Android and iOS platforms.
- Developed secure authentication flows including biometric login and session management.
- Integrated REST APIs to fetch and post market data, portfolio updates, and trade execution.
- Ensured performance optimization and memory efficiency across devices.
- Managed state with Redux for scalable and maintainable app structure.
- Implemented real-time push notifications to keep users informed of market changes and transaction updates.
- Handled app routing and deep linking using React Navigation and Branch.io for a seamless user experience.
- Customized secure storage for sensitive user data like session tokens.
- Contributed to the creation of a multilingual interface supporting Arabic and English.
- Conducted regular testing and QA to ensure stability and bug-free releases.
- Assisted with deployment to both the App Store and Google Play Store.
- Collaborated closely with backend, UI/UX, and QA teams for smooth agile deliveries.

NOQ

Technologies used:

JavaScript, Typescript, React-Native, Android, iOS, Firebase, Socket, Jest, Jenkins, Google Services, Stripe, Vision Camera

Project description:

NOQ allows you to order and prepay for food and drink from vendors while at participating events. You get notified when your order is ready for collection, which you can then pick up or get delivered without the need for queuing.

Roles and Responsibilities:

- Design, build and maintain excellent React Native applications with clean code.
- Implement pixel perfect UI's that match designs.
- Implement clean, modern, smooth animations and transitions that provide an excellent user experience.
- Integrate third-party API's.
- Assist with building estimates.
- Work with modern tools including MentiseBT, PMS, Swagger etc.

Inkwiry

Technologies used:

JavaScript, Typescript, React-Native, Android, Jest, Jenkins, iOS, Redux-toolkit.

Project description:

Inkwiry is a financial technology company that builds applications and tools to make personal financial life planning fast, easy and affordable, changing lives for the better. Inkwiry brings business intelligence to personal financial life planning via integrated applications and tools so young people can make smart moves in life and reach their individual goals. Plan With Inkwiry facilitates financial life planning 5, 10, 15 years into the future. Users enter their data and the Financial Configurator does the rest.

Roles and Responsibilities:

- Design and build project from scratch and maintain excellent React Native applications with clean code.
- Implement pixel perfect UI's that match designs.
- Implement clean, modern, smooth animations and transitions that provide an excellent user experience.
- Integrate third-party API's.
- Work with native modules when required.
- Assist with building estimates.
- Work with modern tools including Asana, PMS, Swagger etc.
- Manage team and follow scrum and agile methodologies.
- Involve in the R&D part of development.
